

Ball check valve type 31 and type 32, ball foot valve type 30

Body + ball material ¹⁾	PVC-U	PVC-C	PP	PVDF
Sealing material (optionally)	• EPDM		• FKM	• FKM-F
Working temperature	0 °C up to 50 °C ²⁾	0 °C up to 90 °C ²⁾	-20 °C up to 80 °C ²⁾	-20 °C up to 100 °C ²⁾
Nominal size	DN 15 up to DN 100 (type 31 = DN 15 up to DN 50)			
Connection with pipe	cement- / welding socket, welding spigot Flange connection acc. to DIN EN 1092-1 (replaces DIN 2501) - PN 10/16 ^{*)}			
Length	Company standard			

¹⁾ Special version with hollow ball on request
^{*)} also acc. to ANSI available

²⁾ Working temperatures for sealing materials:
 EPDM: -20 up to 90 °C
 FKM / FKM-F: -5 up to 100 °C

Assembly and disassembly

all sizes

Disassembly of the valve

Attention: Never dismantle the valve when the pipe is under pressure.

- Remove the valve depending on the connection after loosening the union nut 5, respectively flange connection screws (version flange connection) out of the pipe line.
- Advice: The union nuts 5 have to be loosened by hand or by strap wrench (avoid violent application).
- *Type 30:* Loosen the union nut 5 with the suction basket and remove it.
- *Type 32:* Remove the o-ring from the groove of the body 1.
- Remove the ball seat 3 and thrust ring 6 carefully from the body 1.
- Remove ball 2 out of the Body 1.

Assembly of the valve

- The valve assembly is to be performed in reverse order to the disassembly.
- Before the assembly all parts have to be checked for damages.
- All parts have to be clean.
- After assembly carry out a pressure test acc. to DIN EN 12266-1.

Notes for correct installation

- The valve must be installed stress-free in the pipe (plane parallelism, axial, overall length).
- Flange connection:
The flange bolts have to be tightened equably (tightening torques). In general, use washers for the nuts and bolts in plastic flanges.
- Socket and spigot joint:
The cementing or welding process has to be performed acc. to the relevant guidelines (e. g. DVS).
